CHEAT SHEET FOR COSMETIC DENTISTRY

YOU CAN DO NOTHING

If you do nothing, you may continue to feel self-conscious and dissatisfied with all the things you already dislike about your teeth. In cases of crowded, crooked, gapped or spaced teeth, the shifting may continue to worsen over time. If aesthetic issues are from failing crowns, failing fillings, or dark teeth, this may continue to worsen over time as well. What is it worth to you to finally love your smile? To feel confident to laugh, talk, or smile in social situations? If you are interested, read on!

OPTION 1: SMILE DESIGN WITH PORCELAIN VENEERS OR CROWNS

For patients with worn-down, chipped, mismatched, misshapen or dark/stained teeth, a Smile Makeover with porcelain veneers and crowns can be life changing. For many reasons, crowns or veneers can be a great solution as they DO NOT Change color over time (even with coffee or wine), CAN correct crooked, spaced, gapped, or chipped/broken teeth, and LOOK like a beautiful, natural smile while strengthening your teeth and correcting bite issues. If you want your smile and your confidence back, a Smile Makeover is the most natural, most convenient and most rapid option we have today in dentistry. For most cases, we can completely rebuild and design your smile in only two appointments. Typical case fees range from \$5,000-\$15,000 depending on the number of teeth desired to be treated, and with proper care veneers will maintain their appearance for many, many years.

OPTION 2: INVISALIGN AND COSMETIC ORTHODONTICS

If you have gaps, spaces between your teeth, crooked, or crowded teeth, it is now possible to have beautiful and straight teeth in just 6-12 months. With both Invisalign and Six Month Smiles, we have modern techniques to get your smile and confidence back in way less time than you ever thought possible. With Invisalign and Six Month Smiles we can straighten crooked, overcrowded or widely spaced teeth and fix underbites and overbites. This can be done without the "metal mouth" look of traditional braces, without long years of tightening and torture (many cases usually finish in just 6-12 months), and with more affordability than ever before. Typical case fees range from \$2500-\$5500 depending on the severity of misalignment and orthodontic system used (clear brackets vs. Invisalign clear aligners).
