OPTIONS FOR COSMETIC VENEERS

Cosmetic Dental Veneers

This is one of the best solutions for teeth that have started to wear down, chip, or are misshapen. Veneers can also correct teeth that are discolored, fail to whiten, or are mis-matched after years of dental treatment. For these patients, a Smile Makeover with crowns and veneers can be life-changing. For many reasons, crowns or veneers can be a great solution.

Dental veneers are thin layers of material made of either porcelain or composite custom made to fit over teeth and improve their color, shape, strength, and overall appearance.

OPTION 1

COMPOSITE VENEERS

Composite veneers are done in one visit and are sculpted at the time of placement. The composite resin is applied in layers to the tooth and modeled to the correct shape, length and form. Composite veneers are used in situations in which smaller changes are desired.

Modern composite materials can provide a life-like, beautiful appearance, can be placed in a single visit, and can last an intermediate amount of time (5 to 10 years). Composite veneers allow for less up-front cost, but are not as durable as porcelain veneers, require more maintenance, and tend to stain more easily (especially if you smoke or drink coffee or red wine). Costs range from \$500-700 per tooth and most patients restore 4-8 teeth.

OPTION 2

PORCELAIN VENEERS

Before Porcelain Veneers

After Porcelain Veneers

Porcelain veneers are one of the most beautiful restorations available in cosmetic dentistry. Porcelain veneers are hand-layered by a master ceramist to be incredibly life-like, stain resistant, and strong. Porcelain can fill in much larger spaces than composite, is stronger than natural enamel, can correct severely dark teeth, and can last decades with proper care.

Porcelain veneers DO NOT change color over time (even with coffee or wine), CAN correct crooked, spaced, gapped, or chipped/broken teeth and LOOK like a beautiful, natural smile while strengthening your teeth. Porcelain veneers are warranted in our office for a period of 15 years. Costs range from \$1200-1600 per tooth depending upon ceramic customization, and most cases treat 4-10 teeth.
